DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5 and 9-16, drawn to a method for routing packets between a plurality of ingress and egress ports within a programmably-slicable switch-fabric unit, classified in class 370, subclass 386.
 - II. Claim 6, drawn to a method for testing a simple, programmable slicing mode having small virtual switch slices to check for supportability of larger virtual switch slices, classified in class 370, subclass 242.
 - III. Claims 7-8, drawn to a method for maintaining a common inventory of programmably-sliceable switch-fabric units that can be configured to function in one of two modes depending on demand, classified in class 370, subclass 465.
2. Inventions 1-5 and 9-16; 6; and 7-8 are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions. Claims 1-5 and 9-16 disclose a method for routing packets between a plurality of ingress and egress ports within a programmably-slicable switch-fabric unit. Claim 6 discloses a method for testing a simple, programmable slicing mode having small virtual switch slices to check for supportability of larger virtual switch slices. Claims 7-8 disclose a method for maintaining a common inventory of programmably-sliceable

switch-fabric units that can be configured to function in one of two modes depending on demand.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
